The Willcox Story

Features of Sips :

- Low energy costs
- Energy efficient
- Quicker build times
- Sturdy buildings
- Fantastic option for tight sites

Mr and Mrs Willcox were looking to build a 4 bedroomed environmentally friendly home on their plot in Somerset. They had planning permission and existing drawings, but wanted their design altered and so employed the services of Sips Eco Panels to revise the drawings and apply for Planning Permission and Building Regulation drawings. Once planning was successfully obtained, the Willcox's specified a 194mm Sips Eco Panels frame with rainwater harvesting and photovoltaic tiles to maximize the return on their investment.

Comments

The Willcox's were delighted with their finished project, both from a financial standpoint as well as with the service that they received from Sips Eco Panels. Mr Willcox said he was "over the moon" with his new home and when you look at the figures to the right, you can see why!

In addition to the exceptional thermal performance of the building, the project was also nominated for "Best Sustainable Eco New Build" from his local council and attained a Highly Commended Award whilst going through to the Regional Finals. Another satisfied customer!

Expense / Income	Expense	Income
Gas	£334	
Electric	£450	
Water	£110	
Total for year	£885	
PV Panels rebate		£1200
Profit		<u>£315</u>
